Presentation

“Robotic Stereotactic Radiosurgery for Treatment of Trigeminal Neuralgia”

Objective:

To meet the educational standards required for Mercy Hospital as a Cancer Center including case studies of patient management issues for a variety of cancer sites, functional disturbances of the brain, and to address patient care issues identified at the CyberKnife Institute at Mercy Hospital.

At the end of the presentation the participant will be able to:

- Distinguish CyberKnife Radiosurgery from Gamma Knife and other delivery methods
- Review importance of local control in benign/malignant disease
- Discuss intracranial and extracranial applications for radiosurgery
